Title: REFRIGERATION DEVICE WITH IMPROVED
CONDENSED WATER ELIMINATION

Commissioner for Patents
PO Box 1450
Alexandria, VA 22313-1450

INFORMATION DISCLOSURE STATEMENT

Sir:

In accordance with 37 C.F.R. 1.98, I am submitting a completed "INFORMATION DISCLOSURE STATEMENT BY APPLICANTS" (*Form PTO/SB/08A*) with patents and/or publications as delineated therein attached.

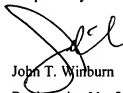

JP 2003-202179 discloses an inventions to drain water generated from a cooler of the freezing and refrigerating device of the show case is atomized with an ultrasonic oscillator and atomized water is blown out right before the radiator of the freezing and refrigerating device to cool the radiator and evaporate atomized water with heat thereof for completely evaporated the same. Since just blowing out atomized water causes re-condensation, leak and contamination by unwanted bacteria, a storage tank and an atomization tank are separated and conditions to avoid reproduction of unwanted bacterial as much as possible and to perform efficient atomization are maintained, and atomized water is supplied when the radiator is under a high temperature condition.

JP 7-225874 discloses that to prevent the dust from accumulating on a piezoelectric vibrator and to omit the maintenance for this purpose by placing the vibrator as an atomizer means at a sloping part of the bottom part of a waste fluid saucer. CONSTITUTION:An automatic vending machine contains a saucer 7 which collects and accumulates the water and other waste fluid that are condensed into the dew by an evaporator 35 placed at a commodity cooling part by a drain pipe 33, a fluid surface detecting device 26 which detects the quantity of the waste fluid accumulated in the saucer 7, and an atomizer means control circuit 27. A sloping part is formed at the bottom part of the saucer 7 and a piezoelectric vibrator 1 is

provided on the sloping part with a tilt secured to the fluid surface. Thus the dust, etc., mixed into the waste fluid 10 are not easily accumulated on the vibrator 1 and the deposited matters 9 of large specific gravity are accumulated at the bottom of the saucer 7 owing to a fact that the vibrator 1 is tilted at a position higher than the bottom of the saucer 7.

If no translation of pertinent portions of any foreign language patents or publications mentioned within the "INFORMATION DISCLOSURE STATEMENT BY APPLICANTS" is included with the aforementioned copies of those applications, patents and/or publications, it is because no existing translation is readily available to the Applicants. As per the Notice in 1273 OG 55 (August 5, 2003) no copies of any above-mentioned US patents and US patent application publications are submitted for this application which was filed after June 30, 2003.

Respectfully submitted

John T. Winburn
